

PROJECT

Functionality (1st draft)

1. Students and teachers can upload notes and rate the ones uploaded by others.
2. Faculty can upload quizzes, questions, tests, etc for students. Students can submit their answers to teachers and to other students only after the answers have been remarked by the teacher.
3. Student's account – marks, library books issued/due, attendance, notifications about followed content (events, people, topics, etc).
4. Teacher's account – education, teaching experience, timeline, notifications about followed content (events, people, topics, etc).
5. Users (students and teachers) will be issued the login details (UN and password) via their [registered] email addresses. All the accounts will be already created at the time of admission. Accounts will be activated at first log in.

NOTE

1. Pre-generated accounts will reduce the chances of fake profiles.
2. User cannot change his/her name, but can only suggest a name.

(This is a list of features which I think should be integrated into the project. If you have any ideas, edit this doc and upload it with your name on top.)
