Learn (May 11th to July 31st)

Basics {
        Anuj : CSS, CSS3, Photoshop.
        Bharat : Vanilla JS (core language), HTML5 APIs (Google Maps, Canvas, etc).
        Deven : CSS, CSS3
        Drupad : CSS, CSS3
        Harsh : Vanilla JS (core language), Client-side JS, CSS.
}
GitHub (and Git) {
        repo-names : {
                PreBuild (learn to collab. and develop): {
                        - This is our working directory (from May 11th onward) till we move on to building stage. Here, we can practice and learn to collaborate via GitHub and understand the basics of Web development.

                        - Repo link: https://github.com/hvsr/PreBuild

                        - Learn some basics of Git and GitHub (https://guides.github.com) and then I will add
                         you as a Collaborator.
                }

                BuildFront : This will be our active directory after July 31st for front-end development. We can start by designing individual components, build them and finally integrate them into a webpage.

                BuildBack : This will be an active directory after July 31st for back-end development.
        }
}
